3DCL basic install instructions.

Video version of these instructions: https://vimeo.com/360047570

Windows (or Windows side on Mac—not recommended).

Double click the RHI, when prompted check "only me".

Although not always necessary, it is usually advisable to open Rhino and type "EditPythonScript" in the command line. This will bring up the Rhino IDE. Once it is opened, close it.

To install the Menu, navigate to Tools>Options>Toolbars. In the pane that comes up click File>Open, then navigate to the RUI file.

Manual RUI

To install the .rui manually, copy the RUI file into:

C:\Users\<your-user-name>\AppData\Roaming\McNeel\Rhinoceros\6.0\UI

Navigate to Tools>Options>Toolbars. In the pane that comes up click the 3DCL .rui

Replacing or updating the plugin

Navigate to:

C:\Users\\<your-user-name>\\AppData\Roaming\McNeel\Rhinoceros\6.0\Plug-ins\PythonPlugins

Delete the 3DCL plugin file.

Do the same for the .rui located in:

C:\Users\<your-user-name>\AppData\Roaming\McNeel\Rhinoceros\6.0\UI

Mac

This plugin will need to be re-written to work properly in Mac, mainly to remove interdependencies between scripts. Therefore, use in Rhino for Mac is not currently supported.

(Testing Rhino for Mac installs)

Folder path for Mac:

/Users/<your-user-name>/Library/Application Support/McNeel/Rhinoceros/6.0/Plug-ins/PythonPlugIns/
